TXA in Trauma Patients

We carry TXA in our medication bag, however, how many of us have actually used it? I thought it would be good to review some information of this drug and why it is an important consideration for our bleeding trauma patients as well as appropriate timing of use. The first link below is a review of CRASH-2 trial which investigated TXA in trauma patients. This discusses application of information from the trial as well as the mechanism of action of TXA. The second link contains further information regarding CRASH-2 as well as a podcast discussion from one of the CRASH-2 authors.

NCME Up-2-Date

Bleeding and Coagulopathy, PROPPR Trial, TXA in Trauma

April 2015

Introduction

In a severely hemorrhaging patient it is important to stop the bleeding and replenish severe blood loss to maintain hemostasis. There is a lot of information out there on how to treat these patients, the links provided discuss bleeding and coagulation as well as transfusions and use of TXA.
